CERTAIN UNIFIED RECURRENCE RELATIONS ASSOCIATED WITH SPECIAL FUNCTIONS

DHEERANDRA SHANKER SACHAN, SHAILESH JALOREE

ABSTRACT. The principal aim of this paper is to investigate certain recurrence relations for $\mathcal{H}$-function. On account of general nature of $\mathcal{H}$-function, we have also obtained recurrence relations of $H$-function and Wright generalized hypergeometric function as special cases of our main findings.

1. Introduction and Preliminaries

In an attempt to achieve certain Feynman integrals in two different ways which arises in perturbation calculations of the equilibrium properties of a magnetic model of phase transitions, Inayat-Hussain [1, 2] investigated $\mathcal{H}$-function, which is defined as

$$\mathcal{H}[z] = \mathcal{H}^{m,n}_{p,q}[z] = \mathcal{H}^{m,n}_{p,q} \left[ \prod_{j=1}^{m} \Gamma(b_j - B_j s) \prod_{j=1}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j} \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p} \Gamma(a_j - A_j s) \right]$$

where $\omega = \sqrt{-1}$ and

$$\chi(s) = \prod_{j=1}^{m} \Gamma(b_j - B_j s) \prod_{j=1}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j} \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p} \Gamma(a_j - A_j s)$$

which contains fractional powers of some of the gamma functions. $L = L_{\tau+\infty}$ is a contour starting at the point $\tau - \infty$, terminating at the point $\tau + \infty$ with $\tau \in \mathbb{R} = (-\infty, \infty)$. Here $z$ may be real or complex but is not equal to zero and an empty product is interpreted as unity.

$m, n, p, q$ are integers such that $1 \leq m \leq q, 0 \leq n \leq p, A_j > 0 (j = 1, \ldots, p), B_j > 0 (j = 1, \ldots, q), a_j (j = 1, \ldots, p)$ and $b_j (j = 1, \ldots, q)$ are complex numbers. The exponents $\alpha_j (j = 1, \ldots, n)$ and $\beta_j (j = m + 1, \ldots, q)$ may take non-integer values. Also, from Inayat-Hussain [2], it follows that

2010 Mathematics Subject Classification. 33C60; 33C99.
Key words and phrases. $\mathcal{H}$-function, $H$-function, Wright generalized hypergeometric function.
for small values of $z$

$$\mathcal{H}^{m,n}_{p,q}[z] = o(|z|^\mu),$$  \quad (3)

where

$$\mu = \min_{1 \leq j \leq m} \Re \left\{ \left( \frac{b_j}{B_j} \right) \right\},$$  \quad (4)

and for large values of $z$

$$\overline{H}^{m,n}_{p,q}[z] = o(|z|^\nu),$$  \quad (5)

where

$$\nu = \max_{1 \leq j \leq n} \Re \left\{ \alpha_j \left( \frac{a_j - 1}{A_j} \right) \right\}.\quad (6)

The sufficient condition for absolute convergence of the contour integral (1) is given by Buschman and Srivastava [3] as

$$\Omega = \sum_{j=1}^{m} |B_j| + \sum_{j=1}^{n} |\alpha_j A_j| - \sum_{j=m+1}^{q} |\beta_j B_j| - \sum_{j=n+1}^{p} |A_j| > 0 \quad (7)$$

and

$$| \arg z | < \frac{1}{2} \pi \Omega. \quad (8)$$

When the exponents $\alpha_j (j = 1, \ldots, n) = \beta_j (m + 1, \ldots, q) = 1$, the $\mathcal{H}$-function reduces to the familiar Fox’s $H$-function.

The Fox’s $H$-function is defined and represented in the following manner [4].

$$H(z) = \mathcal{H}^{m,n}_{p,q}[z] = \overline{H}^{m,n}_{p,q}[z] = \frac{1}{2\pi i} \int_{L} \chi(s) z^s ds,$$  \quad (9)

where $\omega = \sqrt{-1}$ and

$$\chi(s) = \prod_{j=1}^{m} \Gamma(b_j - B_j s) \prod_{j=1}^{n} \Gamma(1 - a_j + A_j s) \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s) \prod_{j=n+1}^{p} \Gamma(a_j - A_j s). \quad (10)$$

The nature of contour $L$ of the integral (9), existence conditions of the $H$-function defined by (9) and other details can be found in the book Kilbas and Saigo [5].

The generalized Wright hypergeometric function [6, 7, 8] is defined by means of the series representation in the form

$$p\Psi_q(z) = p\Psi_q \left[ \begin{array}{c} (a_p, A_p); \\ (b_p, B_p); \end{array} \right] \left[ \begin{array}{c} z \\ \end{array} \right] = \sum_{k=0}^{\infty} \left( \prod_{j=1}^{p} \Gamma(a_j + A_j k) \right) z^k \prod_{j=1}^{q} \Gamma(b_j + B_j k) \frac{k!}{k!}. \quad (11)$$
where \( z \in \mathbb{C}, a_j(j = 1, 2, \ldots, p), b_j(j = 1, 2, \ldots, q) \in \mathbb{C}, A_j(j = 1, 2, \ldots, p), B_j(j = 1, 2, \ldots, q) \) are positive real numbers such that

\[
1 + \sum_{j=1}^{q} B_j - \sum_{j=1}^{p} A_j \geq 0.
\]

2. Recurrence Relations of \( \mathcal{H} \)-Function

In earlier work, Jain [9], Anandani [10], Goyal [11] and Raina [12] have investigated various recurrence relations of Fox's \( H \)-function. Motivated by those avenues, we have investigated some recurrence relations of Fox's \( H \)-function and Wright generalized hypergeometric function have also been derived from the recurrence relations of \( \mathcal{H} \)-function as special cases from our main findings.

**Theorem 1.** If \( z \in \mathbb{C}, m, n, p, q \) be non-negative integers, \( A_j > 0 (j = 1, \ldots, p), B_j > 0 (j = 1, \ldots, q), a_j (j = 1, \ldots, p) \) and \( b_j (j = 1, \ldots, q) \) be complex numbers then there hold the following recurrence relation

\[
\begin{align*}
\mu F_{m,n}^{\alpha,\beta} &\left[ z \left( \frac{1}{2} + \frac{\alpha}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}; \\
&\quad (\rho, 1), (b_j, B_j)_{2,m}, \right. \\
&\left. \left( \frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\rho}{2}, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\rho}{2} + \frac{1}{2} \right) \right] \\
= &\mathcal{H}^{m,n}_{p,q} \left[ z \left( \frac{1}{2} + \frac{\alpha}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}; \\
&\quad (\rho - 1, 1), (b_j, B_j)_{2,m}, \right. \\
&\left. \left( -\frac{1}{2} + \frac{\alpha}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\alpha}{2}, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\alpha}{2} + \frac{1}{2} \right) \right] \\
+ &\mathcal{H}^{m,n}_{p,q} \left[ z \left( \frac{1}{2} + \frac{\alpha}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}; \\
&\quad (\rho - 1, 1), (b_j, B_j)_{2,m}, \right. \\
&\left. \left( \frac{1}{2} + \frac{\alpha}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\alpha}{2}, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{\alpha}{2} + \frac{1}{2} \right) \right] \tag{12}
\end{align*}
\]

where \( 1 \leq n \leq p - 3 \) and \( 1 \leq m \leq q \).

**Theorem 2.** If \( z \in \mathbb{C}, m, n, p, q \) be non-negative integers, \( A_j > 0 (j = 1, \ldots, p), B_j > 0 (j = 1, \ldots, q), a_j (j = 1, \ldots, p) \) and \( b_j (j = 1, \ldots, q) \) be complex numbers then there hold the following recurrence relation

\[
\begin{align*}
(2\mu + 1) F_{m,n}^{\alpha,\beta} &\left[ z \left( -1, 1; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p}; \\
&\quad (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \right. \\
&\left. \left( -1 - \frac{\alpha}{2}, \frac{1}{2}; 1 \right), \left( -\frac{1}{2} + \frac{\alpha}{2}, \frac{1}{2}; 1 \right) \right] \\
= &2(\mu + 1) \mathcal{H}_{p,q}^{m,n} \left[ z \left( 0, 1; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p}; \\
&\quad (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \right. \\
&\left. \left( -1 - \frac{\alpha}{2}, \frac{1}{2}; 1 \right), \left( \frac{1}{2} + \frac{\alpha}{2}, \frac{1}{2}; 1 \right) \right] \\
+ &2\mu \mathcal{H}_{p,q}^{m,n} \left[ z \left( 0, 1; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p}; \\
&\quad (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \right. \\
&\left. \left( -\frac{\alpha}{2}, \frac{1}{2}; 1 \right), \left( -\frac{1}{2} + \frac{\alpha}{2}, \frac{1}{2}; 1 \right) \right] \tag{13}
\end{align*}
\]
where $1 \leq n \leq p$ and $1 \leq m \leq q - 2$.

**Theorem 3.** If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 (j = 1, \ldots, p)$, $B_j > 0 (j = 1, \ldots, q)$, $a_j (j = 1, \ldots, p)$ and $b_j (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$H_{p,q}^{m,n}[z] = \frac{(\mu + \alpha - 1)}{(\mu + \alpha - 1)} H_{p,q}^{m,n}[z]$$

where $1 \leq n \leq p - 1$ and $1 \leq m \leq q$.

**Theorem 4.** If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 (j = 1, \ldots, p)$, $B_j > 0 (j = 1, \ldots, q)$, $a_j (j = 1, \ldots, p)$ and $b_j (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$H_{p,q}^{m,n}[z] = \frac{(\mu + \alpha - 1)}{(\mu + \alpha - 1)} H_{p,q}^{m,n}[z]$$

where $1 \leq n \leq p$ and $1 \leq m \leq q - 2$.

**Theorem 5.** If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 (j = 1, \ldots, p)$, $B_j > 0 (j = 1, \ldots, q)$, $a_j (j = 1, \ldots, p)$ and $b_j (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$H_{p,q}^{m,n}[z] = \frac{(\mu + \alpha - 1)}{(\mu + \alpha - 1)} H_{p,q}^{m,n}[z]$$

where $1 \leq n \leq p - 1$ and $1 \leq m \leq q$.

*JFCA-2022/13(1) CERTAIN UNIFIED RECURRENCE RELATIONS 215*
Theorem 6. If \( z \in \mathbb{C}, m, n, p, q \) be non-negative integers, \( A_j > 0 \) \((j = 1, ..., p)\), \( B_j > 0 \((j = 1, ..., q)\), \( a_j \((j = 1, ..., p)\) and \( b_j \((j = 1, ..., q)\) be complex numbers then there hold the following recurrence relation

\[
\mu \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(1 - \rho, 0.5; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p-1} , (1 + \mu - \rho, 0.5) \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q}
\end{array} \right] \\
= \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(1 - \rho, 0.5; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p-1} , (\mu - \rho, 0.5) \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q}
\end{array} \right] \\
+ 2 \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(-\rho, 0.5; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p-1} , (1 + \mu - \rho, 0.5) \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q}
\end{array} \right]
\]

where \( 1 \leq n \leq p - 1 \) and \( 1 \leq m \leq q \).

Theorem 7. If \( z \in \mathbb{C}, m, n, p, q \) be non-negative integers, \( A_j > 0 \) \((j = 1, ..., p)\), \( B_j > 0 \((j = 1, ..., q)\), \( a_j \((j = 1, ..., p)\) and \( b_j \((j = 1, ..., q)\) be complex numbers then there hold the following recurrence relation

\[
\mu \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(0, 1; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-1} , (-1 - \mu, 0.5; 1)
\end{array} \right] \\
= \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(-1, 1; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-1} , (-1 - \mu, 0.5; 1)
\end{array} \right] \\
- 2 \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(0, 1; 1) , (a_j, A_j; \alpha_j)_{2,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-1} , (1 + \mu, 0.5; 1)
\end{array} \right]
\]

where \( 1 \leq n \leq p \) and \( 1 \leq m \leq q - 1 \).

Theorem 8. If \( z \in \mathbb{C}, m, n, p, q \) be non-negative integers, \( A_j > 0 \) \((j = 1, ..., p)\), \( B_j > 0 \((j = 1, ..., q)\), \( a_j \((j = 1, ..., p)\) and \( b_j \((j = 1, ..., q)\) be complex numbers then there hold the following recurrence relation

\[
\mu \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(\frac{1}{2}, \frac{1}{2}; 1) , (0, \frac{1}{2}; 1) , (a_j, A_j; \alpha_j)_{3,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-2} , (\frac{1}{2}, \frac{1}{2}; 1) , (1 - \frac{\mu}{2} + \frac{\rho}{2}, \frac{1}{2}; 1)
\end{array} \right] \\
= (2\mu + 1)
\]

\[
\mu \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(0, \frac{1}{2}; 1) , (\frac{1}{2}, \frac{1}{2}; 1) , (a_j, A_j; \alpha_j)_{3,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-2} , (\frac{1}{2} + \frac{\mu}{2} + \frac{\rho}{2}, \frac{1}{2}; 1) , (1 - \frac{\mu}{2} + \frac{\rho}{2}, \frac{1}{2}; 1)
\end{array} \right] \\
- (\mu + \rho)
\]

\[
\mu \overline{\Pi}_{p,q}^{m,n} \left[ \begin{array}{c}
(\frac{1}{2}, \frac{1}{2}; 1) , (0, \frac{1}{2}; 1) , (a_j, A_j; \alpha_j)_{3,n} , (a_j, A_j)_{n+1,p} \\
(b_j, B_j)_{1,m} , (b_j, B_j; \beta_j)_{m+1,q-2} , (\frac{1}{2} + \frac{\mu}{2} + \frac{\rho}{2}, \frac{1}{2}; 1) , (1 - \frac{\mu}{2} + \frac{\rho}{2}, \frac{1}{2}; 1)
\end{array} \right]
\]

where \( 1 \leq n \leq p \) and \( 1 \leq m \leq q - 2 \).
Proof: To establish the recurrence relation (12), we have to prove

\[
\mu \overline{H}_{p,q}^{m,n} \left[ \left( \frac{1}{2} + \frac{p}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \right. \\
\left. (\rho, 1), (b_j, B_j)_{2,m}, \right. \\
\left. \left( \frac{1}{2} + \frac{p}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right) \right] \]

\[
- \overline{H}_{p,q}^{m,n} \left[ \left( \frac{1}{2} - \frac{p}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \right. \\
\left. (\rho - 1, 1), (b_j, B_j)_{2,m}, \right. \\
\left. \left( -\frac{1}{2} + \frac{p}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right), \left( -\frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right) \right] \]

\[
- \overline{H}_{p,q}^{m,n} \left[ \left( -\frac{1}{2} + \frac{p}{2} - \mu, \frac{1}{2}; 1 \right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \right. \\
\left. (\rho - 1, 1), (b_j, B_j)_{2,m}, \right. \\
\left. \left( \frac{1}{2} + \frac{p}{2} + \mu, \frac{1}{2} \right), \left( \frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right), \left( -\frac{1}{2} + \frac{p}{2}, \frac{1}{2} \right) \right] = 0.
\]

Expressing $\overline{H}$-function occurring in L.H.S. of (20) in its well known contour integral form, we have

\[
\frac{\mu}{2\pi i} \int_{L} \prod_{j=2}^{m} \Gamma(b_j - B_j s) \prod_{j=2}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j} \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s) \times \frac{\Gamma(\rho - s)\Gamma\left\{ \frac{1}{2}(1 - \rho + 2\mu + s) \right\}}{\Gamma\left\{ \frac{1}{2}(1 + \rho + 2\mu - s) \right\}\Gamma\left\{ \frac{1}{2}(1 + \rho - s) \right\}\Gamma\left\{ \frac{1}{2}(1 - \rho - s) \right\}} z^s ds
\]

\[
- \frac{1}{2\pi i} \int_{L} \prod_{j=2}^{m} \Gamma(b_j - B_j s) \prod_{j=2}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j} \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s) \times \frac{\Gamma(\rho - (1 - s))\Gamma\left\{ \frac{1}{2}(1 - \rho + 2\mu + s) \right\}}{\Gamma\left\{ \frac{1}{2}(1 + \rho + 2\mu - s) \right\}\Gamma\left\{ \frac{1}{2}(1 + \rho - s) \right\}\Gamma\left\{ \frac{1}{2}(1 - \rho - s) \right\}} z^s ds
\]

\[
- \frac{1}{2\pi i} \int_{L} \prod_{j=2}^{m} \Gamma(b_j - B_j s) \prod_{j=2}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j} \prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s) \times \frac{\Gamma(\rho - (1 - s))\Gamma\left\{ \frac{1}{2}(3 - \rho + 2\mu + s) \right\}}{\Gamma\left\{ \frac{1}{2}(1 + \rho + 2\mu - s) \right\}\Gamma\left\{ \frac{1}{2}(1 + \rho - s) \right\}\Gamma\left\{ \frac{1}{2}(1 - \rho - s) \right\}} z^s ds,
\]
now let

\[
\chi(s) = \frac{\prod_{j=2}^{m} \Gamma(b_j - B_j s) \prod_{j=2}^{n} \Gamma(1 - a_j + A_j s)^{\alpha_j}}{\prod_{j=m+1}^{q} \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s)},
\]

then the above expression can be written as

\[
\begin{align*}
&= \frac{1}{2\pi i} \int_{L} \chi(s) \left[ \frac{\Gamma(\rho - s) \Gamma\left(\frac{1}{2} (1 + \rho + 2 \mu + s)\right)}{\Gamma\left(\frac{1}{2} (1 + \rho + 2 \mu - s)\right) \Gamma\left(\frac{1}{2} (1 + \rho - s)\right) \Gamma\left(\frac{1}{2} (1 + \rho - s)\right) \Gamma\left(\frac{1}{2} (1 + \rho - s)\right)} \right] z^s ds \\
&\times \left[ \mu - \frac{(-1 + \rho + 2 \mu - s)(-1 + \rho - s)}{4(\rho - 1 - s)} - \frac{(1 - \rho + 2 \mu + s)(-1 + \rho - s)}{4(\rho - 1 - s)} \right] \times 0 \times z^s ds = 0.
\end{align*}
\]

Hence the recurrence relation (12) is established.

On applying Gamma function formula \( \Gamma(n+1) = n\Gamma(n) \) and following similar lines of proof of recurrence relation (12), recurrence relations (13) to (19) can easily be established. We omit the details.

3. Special Cases

The following recurrence relations for the \( H \)-function are obtained if we take \( \alpha_j \) and \( \beta_j \) to be equal to unity in recurrence relations (12) to (19) respectively.

**Corollary 1.** If \( z \in \mathbb{C} \), \( m, n, p, q \) be non-negative integers, \( A_j > 0 (j = 1, \ldots, p) \), \( B_j > 0 (j = 1, \ldots, q) \), \( a_j (j = 1, \ldots, p) \) and \( b_j (j = 1, \ldots, q) \) be complex numbers then there hold the following recurrence relation

\[
\begin{align*}
\mu H_{m,n}^{p,q} &\left[ z \left( \frac{1}{2} + \frac{\rho - \mu}{2}, \rho, 1 \right), (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, (b_j, B_j)_{2,m}, (b_j, B_j)_{m+1,q}, \right] \\
&= H_{p,q}^{m,n} \left[ z \left( \frac{1}{2} + \frac{\rho - \mu}{2}, \rho, 1 \right), (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, (b_j, B_j)_{2,m}, (b_j, B_j)_{m+1,q}, \right] \\

-\mu - 2\rho, 1 \\
-\mu - 2\rho, 1 \\
-\mu - \rho, 1 \\
-\mu - \rho, 1 \\
-\mu - 2\rho, 1 \\
-\mu - \rho, 1 \\
\end{array} \right] = \frac{4(\mu + \nu - 1)}{(2\nu + \mu - 1)}H_{p,q}^{m,n} \left[ \begin{array}{c}
\frac{1}{m+n+1-p} \\frac{1}{m+n+1+q-2} \\
(b_j, B_j)^{m+1, q-2} \end{array} \right]
\]

where \( 1 \leq n \leq p \) and \( 1 \leq m \leq q - 2 \).
Corollary 5. If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 \ (j = 1, \ldots, p), B_j > 0 \ (j = 1, \ldots, q)$, $a_j \ (j = 1, \ldots, p)$ and $b_j \ (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$
\mu H_{p,q}^{m,n} \left[ z \left( \frac{2 - \mu - \rho}{2}, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \frac{2 + \mu - \rho}{2} \right) \right] = H_{p,q}^{m,n} \left[ z \left( \frac{2 - \mu - \rho}{2}, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \frac{\mu - \rho}{2} \right) \right] + H_{p,q}^{m,n} \left[ z \left( -\frac{\mu - \rho}{2}, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \frac{2 + \mu - \rho}{2} \right) \right]
$$

(25)

where $1 \leq n \leq p - 1$ and $1 \leq m \leq q$.

Corollary 6. If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 \ (j = 1, \ldots, p), B_j > 0 \ (j = 1, \ldots, q)$, $a_j \ (j = 1, \ldots, p)$ and $b_j \ (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$
\mu H_{p,q}^{m,n} \left[ z \left( 1 - \rho, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; (1 + \mu - \rho) \frac{1}{2} \right) \right] = H_{p,q}^{m,n} \left[ z \left( 1 - \rho, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \mu - \rho \frac{1}{2} \right) \right] + H_{p,q}^{m,n} \left[ z \left( -\rho, \frac{1}{2}, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; (1 + \mu - \rho) \frac{1}{2} \right) \right]
$$

(26)

where $1 \leq n \leq p - 1$ and $1 \leq m \leq q$.

Corollary 7. If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 \ (j = 1, \ldots, p), B_j > 0 \ (j = 1, \ldots, q)$, $a_j \ (j = 1, \ldots, p)$ and $b_j \ (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$
\mu H_{p,q}^{m,n} \left[ z \left( 0, 1, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \left( -1 + \mu \frac{1}{2} \right) \right) \right] = H_{p,q}^{m,n} \left[ z \left( 0, 1, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \left( -1 + \mu \frac{1}{2} \right) \right) \right] - 2H_{p,q}^{m,n} \left[ z \left( 0, 1, (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p} - 1; \left( -1 + \mu \frac{1}{2} \right) \right) \right]
$$

(27)

where $1 \leq n \leq p$ and $1 \leq m \leq q - 1$.

Corollary 8. If $z \in \mathbb{C}$, $m, n, p, q$ be non-negative integers, $A_j > 0 \ (j = 1, \ldots, p), B_j > 0 \ (j = 1, \ldots, q)$, $a_j \ (j = 1, \ldots, p)$ and $b_j \ (j = 1, \ldots, q)$ be complex numbers then there hold the following recurrence relation

$$
(\mu - \rho + 1) H_{p,q}^{m,n} \left[ z \left( \frac{1}{2}, \frac{1}{2}, (0, 1), (a_j, A_j)_{3,n}, (a_j, A_j)_{n+1,p} - 1; \left( \frac{1}{2} + \frac{\mu}{2} \right) \right) \right] = (2\mu + 1) H_{p,q}^{m,n} \left[ z \left( 0, \frac{1}{2}, -\frac{1}{2}, (a_j, A_j)_{3,n}, (a_j, A_j)_{n+1,p} - 1; \left( -\frac{1}{2} + \frac{\mu}{2} \right) \right) \right]
$$

(28)
\[-(\mu + \rho)H_{p,q}^{m,n}[z] = \begin{bmatrix} (\frac{1}{2} - \frac{1}{2} \rho, \frac{1}{2}, \frac{1}{2}, \cdots, (a_j, A_j; \alpha_j)_{3,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j)_{m+1,q-2}, (-\frac{1}{2} + \frac{\mu}{2} + \frac{\nu}{2} \rho, \frac{1}{2} + \frac{\nu}{2} \rho) \end{bmatrix} \] (28)

where $1 \leq n \leq p$ and $1 \leq m \leq q - 2$.

Further on reducing $H$-function to Wright generalized hypergeometric function due to the relation

$$p \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \sum_{k=0}^{\infty} \frac{\prod_{j=1}^{p} \Gamma(a_j + A_j k)}{\prod_{j=1}^{q} \Gamma(b_j + B_j k)} \frac{z^k}{k!},$$

$$= H_{p,q+1}^{1,p}(1 - z) \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

We easily obtain recurrence relations of Wright generalized hypergeometric function $p \Psi_q$.

**Corollary 9.** If $z \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, $A_j(j = 1, 2, \cdots) \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, and $B_j(j = 1, 2, \cdots) \in \mathbb{C}$ be positive real numbers then there hold the following recurrence relation

$$\mu \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

$$= p \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

$$+ p \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

(29)

**Corollary 10.** If $z \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, $A_j(j = 1, 2, \cdots) \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, and $B_j(j = 1, 2, \cdots) \in \mathbb{C}$ be positive real numbers then there hold the following recurrence relation

$$\mu \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

$$= 2(\mu + 1) \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

$$+ 2\mu \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots, (a_p, A_p); \\
(b_1, B_1), \cdots, (b_q, B_q); \end{array} \right] \bigg| z = \begin{bmatrix} (1 - a_1, A_1), \cdots, (1 - a_p, A_p) \\
(0, 1, (1 - b_1, B_1), \cdots, (1 - b_q, B_q) \end{bmatrix}$$

(30)

**Corollary 11.** If $z \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, $A_j(j = 1, 2, \cdots) \in \mathbb{C}$, $a_j(j = 1, 2, \cdots) \in \mathbb{C}$, and $B_j(j = 1, 2, \cdots) \in \mathbb{C}$ be positive real numbers then there hold the following
Corollary 12. If \( z \in \mathbb{C} \), \( a_j(j = 1, 2, \ldots, p), b_j(j = 1, 2, \ldots, q) \in \mathbb{C}, A_j(j = 1, 2, \ldots, p), B_j(j = 1, 2, \ldots, q) \) be positive real numbers then there hold the following recurrence relation

\[
 p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-2}, A_{p-2}), (\beta, 1), (1 + \alpha - \beta + \mu, -1) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (1 + \alpha - \beta, -1)
\end{pmatrix} = (2\mu + \alpha - 1) p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-2}, A_{p-2}), (\beta, 1), (1 + \alpha - \beta, 1) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (1 + \alpha - \beta, -1)
\end{pmatrix}
\]

\[
 - (\mu - 1)(\mu + \alpha - 1) p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-2}, A_{p-2}), (\beta, 1), (1 + \alpha - \beta + \mu - 1, 1) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (1 + \alpha - \beta - 1, 1)
\end{pmatrix}
\]

(31)

Corollary 13. If \( z \in \mathbb{C} \), \( a_j(j = 1, 2, \ldots, p), b_j(j = 1, 2, \ldots, q) \in \mathbb{C}, A_j(j = 1, 2, \ldots, p), B_j(j = 1, 2, \ldots, q) \) be positive real numbers then there hold the following recurrence relation

\[
 p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-2}, A_{p-2}), (1 + \mu + 2\rho, 1), \left(1 + \mu + 2\rho, \frac{1}{2}\right) \\
 (b_1, B_1), \ldots, (b_{q-2}, B_{q-2}), (3 + 2\rho, 1), (3 + 2\rho, \frac{1}{2})
\end{pmatrix}
\]

\[
 = \frac{4(\mu + \nu - 1)}{(2\nu + \mu - 1)} p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-2}, A_{p-2}), (1 + \mu + 2\rho, 1), \left(\frac{3 + 2\rho}{2}, \frac{1}{2}\right) \\
 (b_1, B_1), \ldots, (b_{q-2}, B_{q-2}), (3 + 2\rho, 1), (3 + 2\rho, \frac{1}{2})
\end{pmatrix}
\]

(32)

Corollary 14. If \( z \in \mathbb{C} \), \( a_j(j = 1, 2, \ldots, p), b_j(j = 1, 2, \ldots, q) \in \mathbb{C}, A_j(j = 1, 2, \ldots, p), B_j(j = 1, 2, \ldots, q) \) be positive real numbers then there hold the following recurrence relation

\[
 \mu p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-1}, A_{p-1}), (\frac{\mu + \rho}{2}, \frac{1}{2}) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (\frac{\mu + \rho}{2}, -\frac{1}{2})
\end{pmatrix}
\]

\[
 = p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-1}, A_{p-1}), (\frac{\mu + \rho}{2}, \frac{1}{2}) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (\frac{\mu + \rho}{2}, -\frac{1}{2})
\end{pmatrix}
\]

\[
 + p \Psi_q \begin{pmatrix}
 (a_1, A_1), \ldots, (a_{p-1}, A_{p-1}), (\frac{\mu + \rho + 1}{2}, \frac{1}{2}) \\
 (b_1, B_1), \ldots, (b_{q-1}, B_{q-1}), (\frac{\mu + \rho + 1}{2}, -\frac{1}{2})
\end{pmatrix}
\]

(33)

Corollary 15. If \( z \in \mathbb{C} \), \( a_j(j = 1, 2, \ldots, p), b_j(j = 1, 2, \ldots, q) \in \mathbb{C}, A_j(j = 1, 2, \ldots, p), B_j(j = 1, 2, \ldots, q) \) be positive real numbers then there hold the following
Corollary 16. If $z \in \mathbb{C}$, $a_j (j = 1, 2, \cdots, p)$, $b_j (j = 1, 2, \cdots, q)$ be positive real numbers then there hold the following recurrence relation

\begin{align*}
(\mu - \rho + 1)_{\mu-p} & \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots , (a_{p-1}, A_{p-1}), (1, 1) \\ (b_1, B_1), \cdots , (b_{q-1}, B_{q-1}), \left( \frac{3-\mu}{2}, \frac{1}{2} \right) \end{array} \right] z \\
= & \, p_{\mu} \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots , (a_{p-1}, A_{p-1}), (2, 1) \\ (b_1, B_1), \cdots , (b_{q-1}, B_{q-1}), \left( \frac{3-\mu}{2}, \frac{1}{2} \right) \end{array} \right] z \\
- & \, 2_{\mu} \Psi_q \left[ \begin{array}{c} (a_1, A_1), \cdots , (a_{p-1}, A_{p-1}), (1, 1) \\ (b_1, B_1), \cdots , (b_{q-1}, B_{q-1}), \left( \frac{1-\mu}{2}, \frac{1}{2} \right) \end{array} \right] z . \quad (35)
\end{align*}
